LINE IN THE "SPOTLIGHT" MICRON TRANSFORMER

Micron is a world leader in providing control transformers to the OEM market. With over 200 catalog numbers in stock available for Next Day shipping, over 75% of annual sales involve custom designs for specific OEM customers.

Micron developed the industry's first epoxy encapsulated machine tool transformer known as "Impervitran"

In 1997 Micron introduced it's Globaltran line of control transformers designed for international applications.

Globaltran is CE marked for compliance with current IEC standards and meets IEC529IP20 when supplied with optional touch-proof terminals.

Micron transformers are UL listed, CSA certified and meet or exceed NEMA

standards.

Kent Industries Inc. has been an authorized Micron distributor for the last 20 years.

We maintain an extensive Micron inventory, here in our Newton, N.J. facility.

If you find yourself in need of a quality transformer product such as Micron, please feel free to give us a call at 1-800-229-5129.

Whether it be for a price quote, to check availability, or for more detailed technical assistance, we at Kent Industries are always here to help.

Amazingly unattractive picture of Hanna, but she's begun to take lunchtime seriously. As it approaches the noon hour, up she jumps onto the lunch table and waits. Certainly a bad habit but certain to make us laugh. She celebrated her 1 year birthday last week. Pretty sure she didn't have a clue!

FROM ALL OF US AT KENT - HAVE A HAPPY 4TH OF JULY

KENT CELEBRATES 25 YEARS IN BUSINESS.

As we see businesses come and go over the years, we are particularly thankful to our customers for making it possible.

At the top of the page you may have noticed our Kent Store web address. We're proud of the way the store is progressing. Parts are being added weekly. When you get a chance, go to: www.kentstore.com and see what we have to offer. Many orders can now be processed online.

UPDATE: MOELLER OBSOLETE CIRCUIT BREAKERS—TYPE NZM6-10

Up until now, we have been able to acquire obsolete handles type H6-NA, H9-NA and H10-NA for the obsolete Moeller circuit breakers. We have now been told by the manufacturer that this is no longer the case. In order to purchase a new handle, shaft, or

rotary drive mechanism, a complete circuit breaker must also be purchased. Moeller will not supply the accessories by themselves any longer. If you have any require-

ment for these parts, please give us a call at 1-800-222-5129. We will steer you through any confusion.
